Course Deliverables

1. **Progress Report 2** is due on **October 2nd**, focusing on the topics:
    - Background and motivation (Ursula)
    - User needs and project statement (Seaya)
    - Requirements are listed at Appendix A — Progress Report 1

Progress Report 2 requirements: Appendix A — Progress Report 2. Our scope-specific notes for those sections:

Design Input Notes

- Based on Doppler ultrasound research + stakeholder defined user needs, create a list of ultrasound data types needed to produce robust, full-coverage software.
    - i.e. interventional vs standard - and what kinds of interventions? How will that define our coverage?
- Use preliminary FMD recording to detail specific Doppler ultrasound metrics and data.

Development Process Notes

- How will we be exploring/testing different image processing tools/libraries?
- What are high-level design outputs that we will be working towards?
